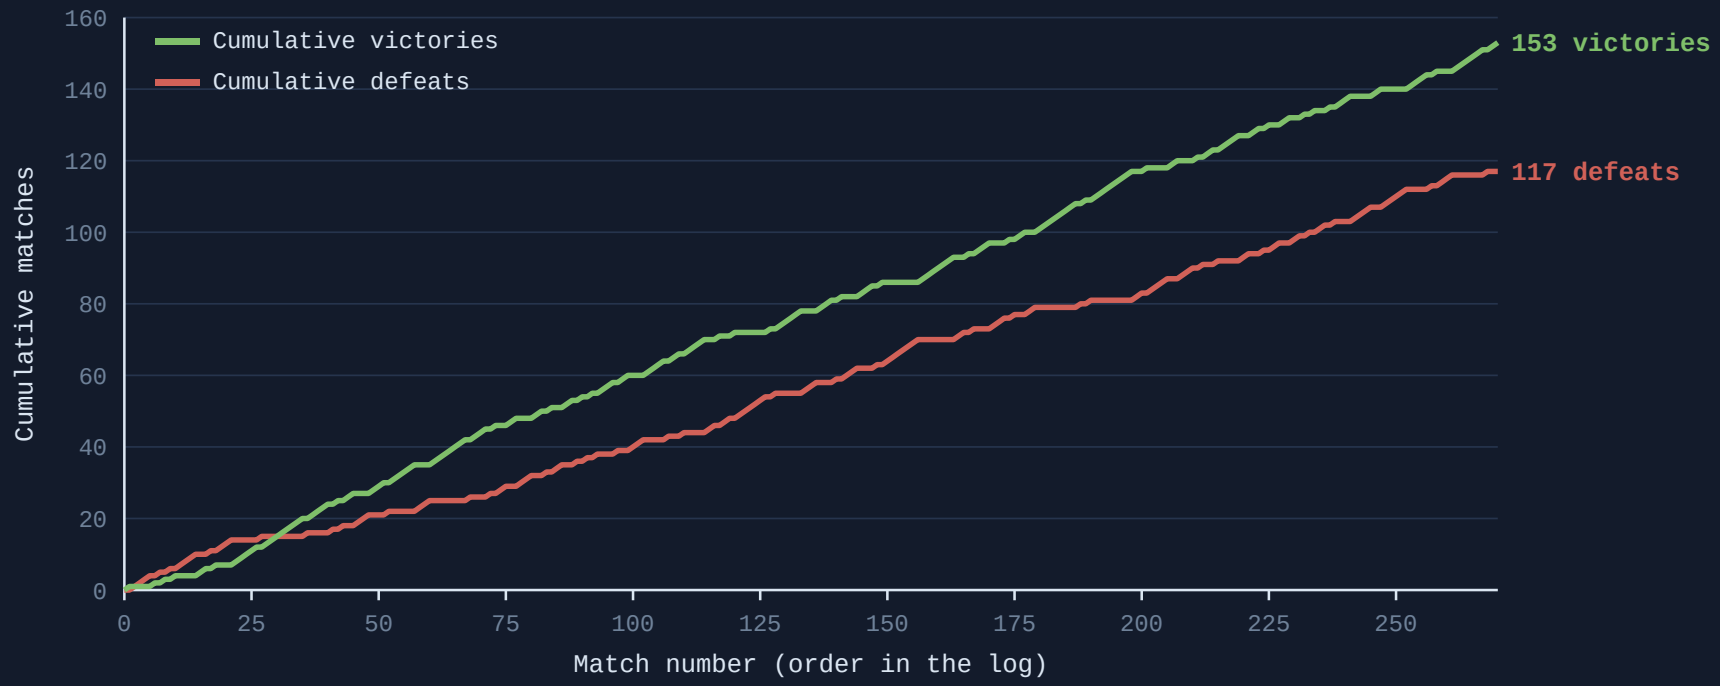

CHART 1

Cumulative victories and defeats

How many won and lost matches have piled up as you move through the log

Counting unit: matches (each unique match, by session ID). Sample: 270 unique matches from 304 pasted reports (34 repeats excluded) · file matches-large.txt.

EXACT DATA

Up to match no.	Victories	Defeats
50	29	21
100	60	40
150	86	64
270	153	117

WHAT IT SHOWS

- 153 (56.7%) of the 270 matches were won and 117 (43.3%) were lost.
- The largest lead of victories over defeats was +36, reached at match no. 198; at the end it is +36.
- Longest streak: 8 victories in a row; 7 defeats in a row.
- A steeper line means that result piled up faster in that stretch.

HOW TO READ IT AND WHAT IT DOES NOT SHOW

- Horizontal axis: position of the match in the log (the first one pasted is 1). It is not a date: the log has no dates.
- Vertical axis: running total of matches, not the single match.
- Each step of a line is exactly one match. It only counts results: it says nothing about Silver Lions, research points or duration.

Chart 1. Cumulative victories and defeats. Source: own work made with WT Session Readout, from 270 unique matches in matches-large.txt; counts are matches, not points, time or Silver Lions.

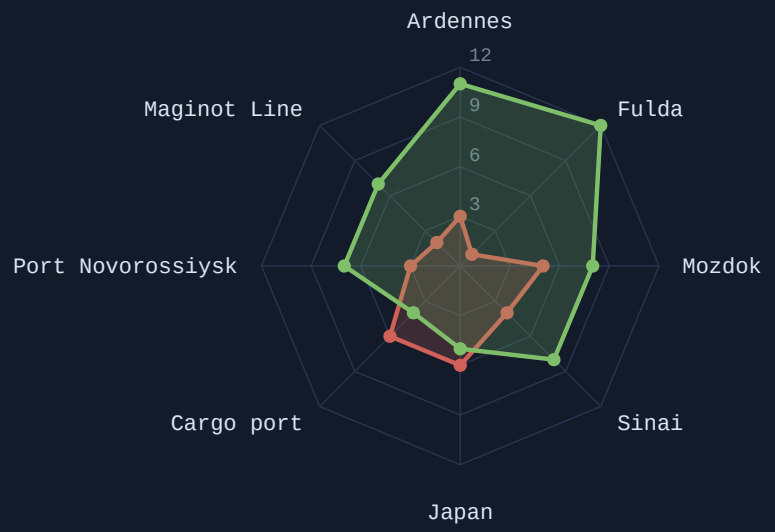

When to use this chart type (line). A line chart shows how a quantity changes along an ordered sequence: here, the sequence of matches in the log.

CHART 2

Victories and defeats on the 8 most played maps

Matches won and lost on each of the 8 maps with the most matches

Counting unit: matches (each unique match, by session ID). Sample: 270 unique matches from 304 pasted reports (34 repeats excluded) · file matches-large.txt.

EXACT DATA

Map	Wins	Losses	Total	% wins
Ardennes	11	3	14	78.6%
Fulda	12	1	13	92.3%
Mozdok	8	5	13	61.5%
Sinai	8	4	12	66.7%
Japan	5	6	11	45.5%
Cargo port	4	6	10	40.0%
Port Novorossiysk	7	3	10	70.0%
Maginot Line	7	2	9	77.8%

WHAT IT SHOWS

- These 8 maps add up to 92 (34.1%) of the 270 matches; the other 48 maps add up to 178 (65.9%).
- Most victories: Fulda (12). Highest win percentage: Fulda (92.3%, 12 of 13). Lowest: Cargo port (40.0%, 4 of 10).
- A green polygon farther from the centre on an axis = more victories on that map; the red one, more defeats.

HOW TO READ IT AND WHAT IT DOES NOT SHOW

- Each axis is a map, from most to fewest matches, clockwise from the top (ties for 8th place are sorted alphabetically). The rings count matches, every 3.
- Each map has few matches (between 9 and 14): the percentages change a lot with a single match, so they are not a reliable measure of a "good" or "bad" map.
- The radar shows the shape; the exact values are in the table.

Chart 2. Victories and defeats on the 8 most played maps. Source: own work made with WT Session Readout, from 270 unique matches in matches-large.txt; counts are matches, not points, time or Silver Lions.

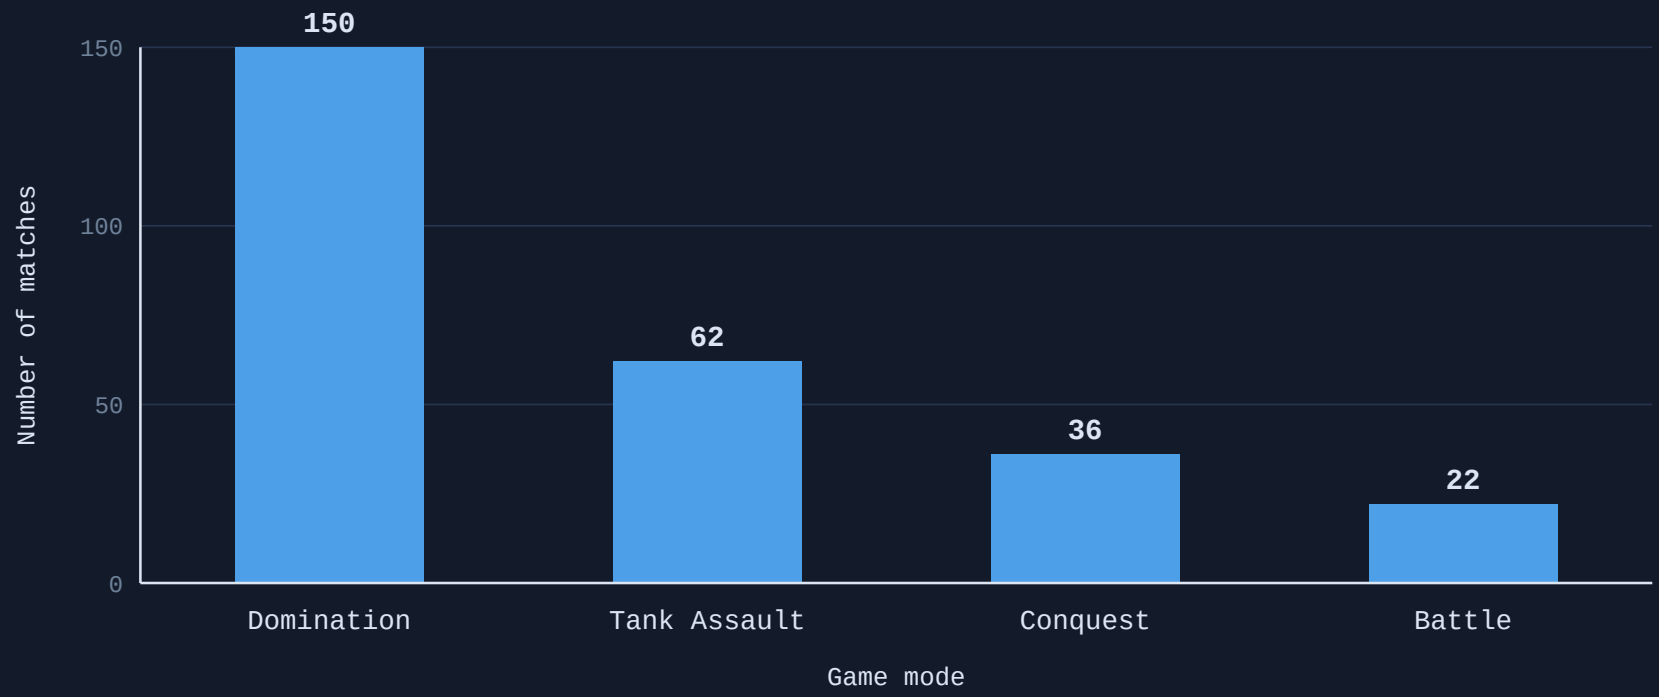

When to use this chart type (radar). A radar (spider) chart compares several categories on one scale from a common centre and shows the "profile" of each series. It works best with 5 to 8 axes; it is not suited to reading exact values.

CHART 3

Matches per game mode

Number of matches in each mode, as it appears in the log

Counting unit: matches (each unique match, by session ID). Sample: 270 unique matches from 304 pasted reports (34 repeats excluded) · file matches-large.txt.

EXACT DATA

Game mode	Matches	% total
Domination	150	55.6%
Tank Assault	62	23.0%
Conquest	36	13.3%
Battle	22	8.1%
Total	270	100.0%

WHAT IT SHOWS

- Domination is the most frequent mode: 150 (55.6%).
- The 4 modes add up to 270 matches, the whole sample.
- "Tank Assault" here is the mode, and it matches the tool's category of the same name.

HOW TO READ IT AND WHAT IT DOES NOT SHOW

- The height of each bar is the number of matches in that mode (vertical axis, from 0). The mode name is the one in square brackets in each report.
- It does not say who won in each mode, nor how much was earned: only how many matches there are.

Chart 3. Matches per game mode. Source: own work made with WT Session Readout, from 270 unique matches in matches-large.txt; counts are matches, not points, time or Silver Lions.

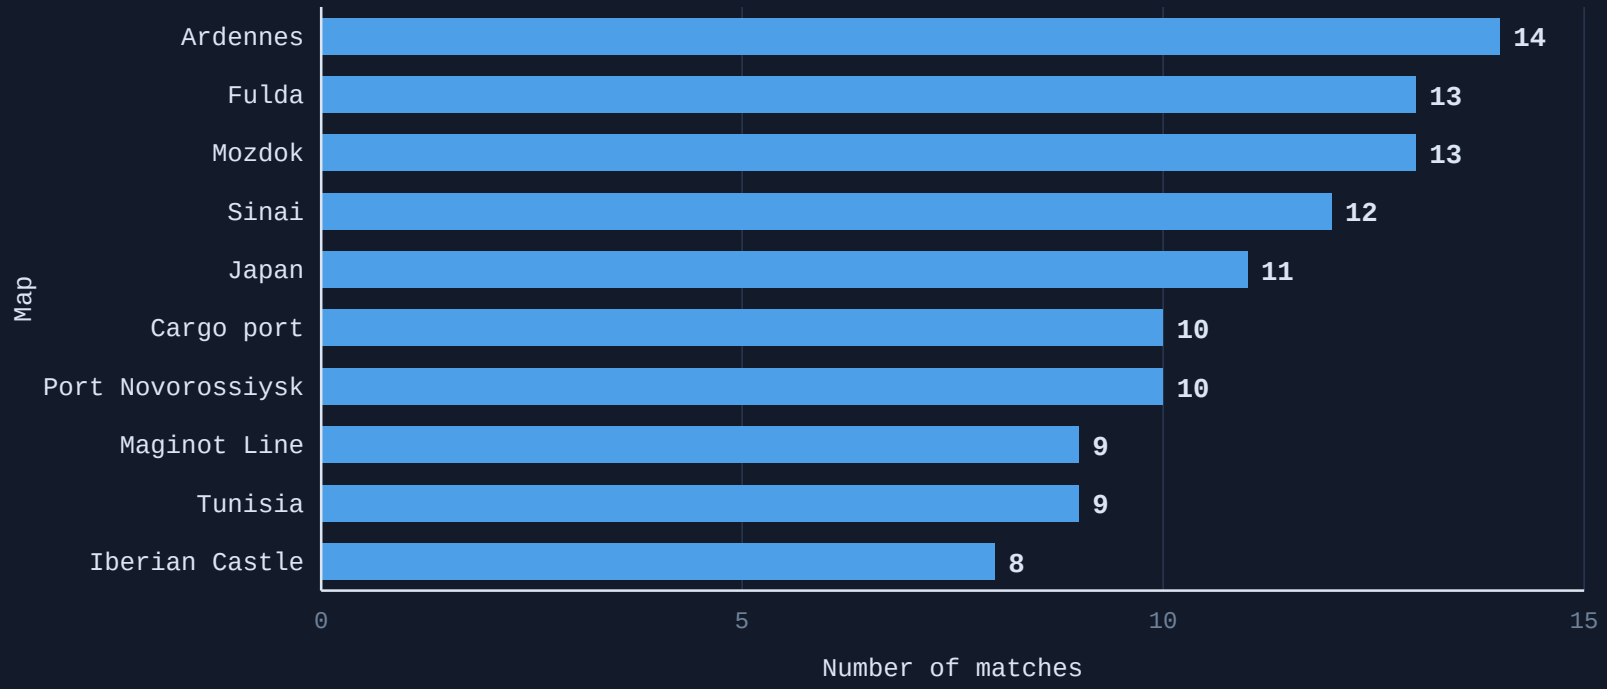

When to use this chart type (vertical bars). Vertical bars compare quantities across a few categories with short names: the height of each bar is the value, and zero is always the base.

CHART 4

The 10 most played maps

Number of matches per map, sorted from most to fewest

Counting unit: matches (each unique match, by session ID). Sample: 270 unique matches from 304 pasted reports (34 repeats excluded) · file matches-large.txt.

EXACT DATA

Item	Matches	% total
The 10 maps in the chart	109	40.4%
The other 46 maps	161	59.6%
Different maps in total	56	—

WHAT IT SHOWS

- The most played map is Ardennes, with 14 matches (5.2%).
- The 10 maps in the chart hold 109 (40.4%) of the 270 matches.
- 3 maps have 8 matches, the value of the last place: 1 are in the chart and 2 are left out; among equals, the order is alphabetical.

HOW TO READ IT AND WHAT IT DOES NOT SHOW

- The length of each bar is the number of matches on that map (horizontal axis, from 0); each bar is a map (vertical axis).
- The "map" is the mission name in the report. It does not show results, points or time on each map.

Chart 4. The 10 most played maps. Source: own work made with WT Session Readout, from 270 unique matches in matches-large.txt; counts are matches, not points, time or Silver Lions.

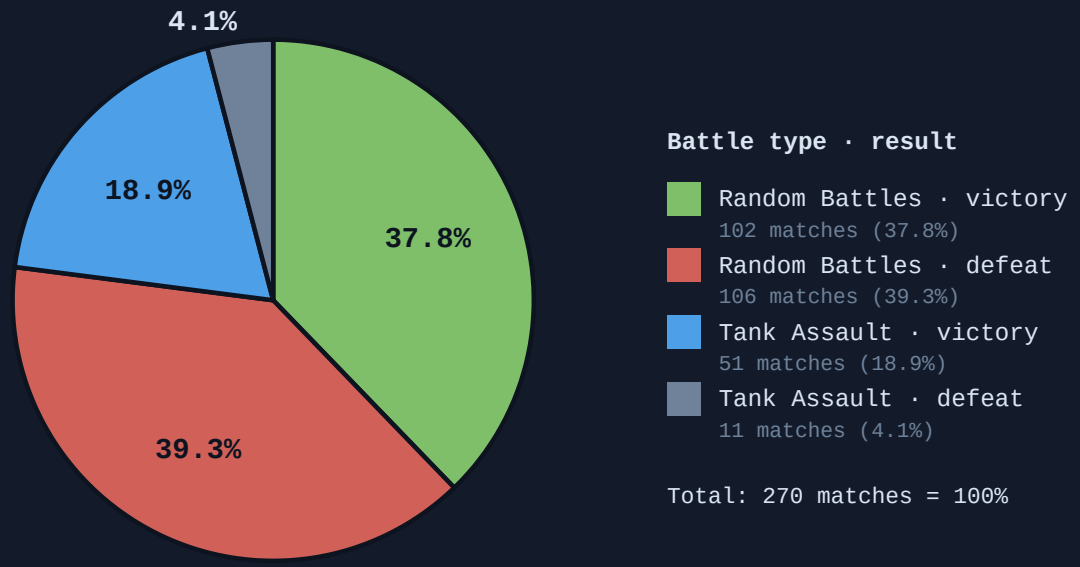

When to use this chart type (horizontal bars). Horizontal bars are ideal when category names are long or there are many categories, and sorting them from largest to smallest makes a ranking readable at a glance.

CHART 5

Matches by battle type and result

What share of the matches belongs to each combination of battle type and result

Counting unit: matches (each unique match, by session ID). Sample: 270 unique matches from 304 pasted reports (34 repeats excluded) · file matches-large.txt.

EXACT DATA

Group	Matches	% total
Random Battles · victory	102	37.8%
Random Battles · defeat	106	39.3%
Tank Assault · victory	51	18.9%
Tank Assault · defeat	11	4.1%
Total	270	100.0%

WHAT IT SHOWS

- Random Battles: 208 matches, of which 102 were won (49.0%).
- Tank Assault: 62 matches, of which 51 were won (82.3%).
- Overall: 153 victories out of 270 matches (56.7%).

HOW TO READ IT AND WHAT IT DOES NOT SHOW

- Each slice is a share of the total: all slices add up to the 270 matches (100%). Its size is proportional to the number of matches; the percentage is written on it.
- "Random Battles" is the category the tool gives to every match whose mode does not match a rule (the default rule is "Tank Assault"); it is not one specific game mode.
- It has no axes. It does not weight by points, time or Silver Lions.

Chart 5. Matches by battle type and result. Source: own work made with WT Session Readout, from 270 unique matches in matches-large.txt; counts are matches, not points, time or Silver Lions.

When to use this chart type (pie). A pie chart shows how a total is split into parts; it only works with a few parts. It has no axes: each slice is a share of the total.

GLOSSARY

How to read this report: what each term means

Definitions of the words and measures used in the charts

WHAT IS COUNTED AND WHERE IT COMES FROM

Term	What it means in this report
Match	One battle played, as it appears in one report of the log. It is the unit of every count in this document.
Pasted report	Each block of text for one match that was pasted into the tool (304 in total).
Unique match	A match counted only once, identified by its session ID (270 in total).
Repeated match	A report whose session ID had already been counted; it is not counted again (34 in total).
Session ID	The unique code that goes with each match on the "Session" line of the report.
Sample	The set of matches analysed: 270 unique matches from the file matches-large.txt, matches played by the project owner (Apolox).
Order in the log	The position in which the pasted matches appear (the first is 1). It is not a date: the log has no dates.
Victory / Defeat	Result of the match according to the report headline ("Victory" / "Defeat").

HOW THE MEASURES ARE CALCULATED

Term	What it means in this report
Percentage (%)	Matches in the group ÷ reference matches × 100. The reference is stated in each table: "% total" is over all unique matches; "% wins" is victories ÷ matches on that map.
Cumulative	A running sum: each point on the line includes all the earlier matches.
Lead	Cumulative victories minus cumulative defeats.
Streak	Consecutive matches with the same result.
Game mode	The text in square brackets in the report headline (for example Domination).
Battle type (category)	A group the tool assigns from the mode: "Tank Assault" if the mode contains it (the default rule); everything else is "Random Battles".
Map	The mission name in the report headline.
Blue theme	One of the tool's 8 colour themes; it sets the colours of the whole document.

HOW TO READ THE CHARTS

Element	What it means
Horizontal / vertical axis	Lines with numbered marks. In each chart the axis title says what it measures and in what unit (always matches, except chart 1: position in the log).
Line (chart 1)	Shows how a quantity changes along an ordered sequence; steeper = it piles up faster.
Radar or spider (chart 2)	Each axis leaves a common centre and stands for a map; the rings are the scale in matches; each colour is a series.
Bars (charts 3 and 4)	The length of the bar is the number of matches; it always starts at 0.
Pie (chart 5)	Each slice is a part of the total (100%); it has no axes.

WHAT THIS REPORT DOES NOT MEASURE

Item	Status
Silver Lions (SL) and research points (RP)	Not charted: every count is matches.
Play time and dates	Not charted; the log has no dates.
Vehicles and awards	Only listed in the glossary with their frequency; not charted.
Vehicle names (TAM 2C, Leopard 2K…)	They are proper names.

GLOSSARY

War Thunder glossary (1): economy and log lines

Terms as they appear in the log (the game's own English names); the meanings are explanations written for this report

ECONOMY

In the log	What it means
SL (Silver Lions)	The game's main currency: used to buy vehicles, crews and modules, to repair, and to restock ammunition.
RP (Research Points)	Points used to research new vehicles and modules.
CRP	Figure on the "Total" line that the tool uses as the match's research points. The abbreviation is not expanded because that could not be confirmed; the final "RP" figure of the log also adds research progress, which is why it is not used.
Net SL / Earned SL	Net = earned minus costs (repair, ammunition and crew, respawns). Definition used by the tool.
PA (premium account)	A paid account that increases what you earn; the log breaks it out as "(PA)".
Booster	A temporary bonus; the log breaks it out as "(Booster)".
mission points	Points added to the mission score; they appear next to each event.

COSTS AND THE END OF THE REPORT

In the log	What it means
Automatic repair	Cost of repairing the vehicles after the match.
Ammo & crew replenishment	Cost of restocking ammunition and crew members.
Respawns in battle	Cost of spawning again in the same match.
Researched unit	RP that went to unlocking a new vehicle (a "research target").
Researching progress	RP that went to modules or progress on another vehicle ("Other RP").
Used items	Consumables and items spent in the match.
Session	Line with the session ID, unique per match.
Total	Final line with the match's SL, CRP and RP.
Activity	Activity percentage reported by the game (overall or per vehicle).
Skill Bonus	Extra RP tied to the vehicle's skill level.
damaged / backup	Tags the log puts on a damaged or reserve vehicle.

GLOSSARY

War Thunder glossary (2): report sections, game modes and battle types

Sections group the rewards of each match; the count shows in how many of the unique matches each one appears

REWARD SECTIONS OF THE REPORT

In the log	What it groups	Matches
Activity Time	Time during which you were active in the match	270 of 270
Time Played	Time played with each vehicle	270 of 270
Damage to the enemy	Rewards for damage dealt	189 of 270
Awards	Medals of the match (see the awards list)	185 of 270
Critical damage to the enemy	Rewards for critical damage	169 of 270
Reward for winning	Reward for the victory	153 of 270
Destruction of ground targets	Rewards for destroying ground vehicles or targets	136 of 270
Scouting of the enemy	Rewards for spotting enemies	134 of 270
Reward for participating in the mission	Reward for taking part in the mission	117 of 270
Assistance in destroying the enemy	Rewards for helping destroy enemies	99 of 270
Damage taken by scouted enemies	For damage others deal to enemies you spotted	95 of 270
Destruction by allies of scouted enemies	For spotted enemies later destroyed by allies	91 of 270
Skill Bonus	Bonus tied to skill level	56 of 270
Capture of zones	Rewards for capturing zones	44 of 270
Destruction of aircraft	Rewards for shooting down aircraft	42 of 270
Automatic repair of all vehicles free.	Notice that the repair had no cost	28 of 270
Severe damage to the enemy	Rewards for severe damage	22 of 270
Munitions eliminations	Rare section; shown under its log name	3 of 270

GAME MODES AND BATTLE TYPES

In the log	Matches
Domination (mode)	150
Tank Assault (mode)	62
Conquest (mode)	36
Battle (mode)	22
Random Battles (category)	208
Tank Assault (category)	62

GLOSSARY

War Thunder glossary (3): awards

Awards that appear in the sample's matches, from most to least frequent (appearances = times the award shows up, not matches)

AWARDS

In the log	Appearances
Tank Rescuer	229
Intelligence	149
Teamwork	99
Adamant	67
Avenger	50
Help with Repairing	50
According to Intelligence	47
Multi strike!	35
The Best Squad	31
Eye for Eye	29
Rank does not matter	22
Supporting Fire	19
Shadow strike streak!	18

AWARDS (CONTINUED)

In the log	Appearances
Professional	10
Base capturer streak!	8
Sniper	8
Without a miss	8
Assists streak!	7
On Hand	7
Final blow!	6
Balancer	3
Base defender!	3
First strike!	2
God Mode!	1
Wingman	1

NOTE

About awards	
Exact condition	The condition for earning each award is defined by the game; here only its name and how many times it appears are given.
"Help with Repairing"	Corresponds to helping an ally repair their vehicle; the rest are identified by their name.

GLOSSARY

War Thunder glossary (4): maps

56 different maps in the sample, sorted by number of matches

MAPS

In the log	Matches	%
Ardennes	14	5.2%
Fulda	13	4.8%
Mozdok	13	4.8%
Sinai	12	4.4%
Japan	11	4.1%
